Who We Are

Delivering solar solutions since 2016.

Mashreq empowers farms and industries across Egypt to reduce energy costs and operate sustainably — from irrigation in remote deserts to heavy-load industrial facilities. Our custom systems are built for performance, reliability, and long-term value.

A man wearing a yellow hard hat and safety glasses is looking down at a set of documents on a table. In the background, there is a large array of solar panels installed on a rooftop. A mosque with a minaret is visible in the distance under a clear sky.

Our Vision

TO BE EGYPT'S MOST TRUSTED PARTNER

in delivering high-quality solar energy solutions for farms and factories, enabling a more sustainable and profitable future.

Our Mission

Customized Design

We design solar systems tailored to each project's unique conditions

Premium Components

We use premium components and adhere to world-class standards

Maximized ROI

Our approach ensures a high, long-term return on investment

Reliable Support

We provide fast and ongoing technical support

CORE VALUES

- **Professionalism**

Every step is planned, precise, and expertly executed.

- **Commitment**

We stand by our timelines, guarantees, and support.

- **Quality**

From components to finishing, we never compromise.

- **Sustainability**

In our solutions — and in our client relationships.

- **Transparency**

Clear pricing. Clear expectations. Clear results.

- **Accountability**

Every project carries our name — and we treat it like our own.

Certifications

ISO 9001

Quality Management System

Covering import, export, commercial agencies, and solar energy systems supply.

2015

ISO 14001

Environmental Management

Environmental performance and compliance in all operations.

2015

ISO 45001

Occupational Safety

OHS&S management — protecting our teams and worksites.

2018

NREA Gold

Gold Qualification

Highest-tier solar certification by Egypt's New & Renewable Energy Authority.

2024–2027

CERTIFICATE

كود الشركة ١٢٢.....

تشهد مينة تنمية واستخدام الطاقة الجديدة والمتجددة

أن شركة / مشفوق لاظمة.. الطاقة ..(ف.ذ.م.م)..... سجل تجاري بقم (٩٧٣٣٧.....)

حاصلة على شهادة تأميل "تهئية" لإنشاء مخططات طاقة شهسية على حجرة (٢١) ميغا وات كحد أقصى.

مدة التأميل ثلاث سنوات سارية من ٨/ ٩١ إلى ٨/ ٢٠٢٤/ ٢٠٢٢

وهذه شهادة من العينة دون أدنى مستواية عليما فيل القير

التوقيع: 
دكتور مهندس:  العياط

OUR SERVICES

Our services are designed to deliver the best solutions with top quality and reliability.

EPC —

(Engineering, Procurement & Construction).

We offer integrated services that begin with project assessment and continue through to full system commissioning.

- | Detailed system design (PVsyst, AutoCAD, SketchUp)
- | Energy simulation & 3D modeling
- | Certified global component supply
- | Full installation, wiring & protection systems
- | Commissioning, testing & handover

Feasibility—

(Financial · Technical · Energy Studies)

We prepare realistic feasibility studies for each project

- | Energy consumption & load pattern analysis
- | Optimal system capacity determination
- | Annual savings & payback calculation
- | Return on investment projection
- | Electricity price scenario modeling

After-Sales —

(O&M · Support · Training).

We believe the client relationship truly begins after the system is commissioned.

- | Comprehensive long-term warranty coverage
- | 48-hour emergency response guarantee
- | Scheduled performance inspections
- | Client team operation training
- | Remote system monitoring & alerts

TYPES OF SOLAR ENERGY SYSTEMS

On-Grid

Reduces electricity bills. Feeds surplus to the national grid.

No power during grid outages.

Factories, farms, rooftops with grid access

Off-Grid

Fully independent. Battery storage. Zero dependency on utility.

Higher upfront investment in storage.

Remote farms, desert projects, Sinai

Hybrid

Solar + diesel backup. Continuous uninterrupted operation.

More complex system integration.

Telecom towers, oil stations

Solar Pumping

Powers water pumps. Dramatically cuts fuel & electricity costs.

Purpose-built for irrigation applications.

Agricultural irrigation across all regions

Project Process

1

Client Consumption Analysis

- Review current electricity bills
- Identify load patterns and peak hours
- Accurately determine required energy

2

Technical System Design

- Prepare simulation using PVsyst
- Draw complete design using SketchUp & Autocad
- Select appropriate system type

3

Site Visit and Inspection

- Technical site inspection (sun angle, area, shading, soil)
- Soil study for farms or rooftop study for factories/buildings

4

Financial Feasibility Study

- Expected return calculation
- Payback period
- Annual savings

5

Proposal & Contract Signing

- Discussing technical and financial terms
- Defining implementation period and warranties

6

Supplying Components

- Supplying panels, inverter, batteries (if needed)
- Preparing mounting and connection tools

7

Installation & Execution

- Full implementation with quality and safety standards
- Initial system testing before commissioning

8

Grid Connection (If Applicable)

- Preparing connection paperwork
- Coordinating with utility company for grid connection (net metering)

9

System Commissioning

- System testing and load application
- Project handover and live operation

10

After-Sales Service

- Periodic maintenance visits
- Technical support and client training
- 48-hour response to faults

OUR CLIENTS

We take pride in our clients, our true partners in success. Since 2016, we've been honored by the trust of leading names and top-tier companies. Over nine years of quality, commitment, and lasting partnerships, moving forward together toward a sustainable future.

PROJECTS

Our project reflects Mashreq for Solar Energy's ability to transform solar potential into reliable, high-performance energy systems. Across commercial, industrial, and institutional sectors, we have successfully delivered rooftop and ground-mounted solar installations tailored to each client's operational needs. Every project is built on precise engineering, optimized system design, and strict quality standards to ensure maximum energy yield and long-term reliability. Through these projects, Mashreq helps organizations reduce energy costs, strengthen energy resilience, and move confidently toward a more sustainable future.

Total & Wataniyah -Hybrid Solar-Diesel-Batt ery Systems

Delivered hybrid solar power systems for Total and Wataniyah service stations across Egypt, combining solar PV, battery storage, and diesel backup to provide reliable electricity for remote locations.

WE Central (COP27) -250 kWp On-Grid System

Installed a 250 kWp rooftop solar plant at WE Central in Sharm El Sheikh in partnership with Huawei, supporting Egypt's renewable energy initiatives during COP27.

Arab Academy, Aswan -200 kWp BIPV

Developed a 200 kWp on-grid BIPV solar system integrated into the building structure, combining clean energy generation with modern architectural design.

e& Telecom Sites -Off-Grid Hybrid Systems

**Implemented off-grid solar
hybrid systems for multiple e&
telecom sites across Egypt,**
reducing diesel usage while
improving energy efficiency and
reliability.

Why Mashreq

"We don't just
install panels —
we cultivate
trust."

9+

200+

Projects

12+

Governorates

14+

Key Projects

4

Certifications

01

Tailored Engineering

Every system designed for the exact soil, climate, and energy profile of the site.

02

Premium-Only Components

We source exclusively from certified global suppliers. No substitutions.

03

Transparent Financials

Detailed ROI & feasibility studies before any commitment.

04

48-Hour Support Guarantee

Fast emergency response, regular check-ups, and full client training.

05

Egypt-Wide Coverage

Operations across 12+ governorates — desert, delta, and coast.
